EDUCATION

Covenant University

B.Sc. Computer Science

Ota, Ogun State

Expected Aug 2026

TECHNICAL SKILLS

Cloud & Infra: AWS EC2, S3, IAM, Lambda, DynamoDB, VPC, Security Groups, CloudWatch, Docker, Nginx

Networking: Network commissioning, Switch/router configuration, Firewall setup, Huawei & Cisco hardware, pfSense, Structured cabling

Cybersecurity: Ethical hacking, Penetration testing, Vulnerability assessment, Digital forensics, Malware analysis, Kali Linux, Metasploit

Programming: Python, TypeScript, PHP, SQL — scripting, automation, API integration, backend services

Tools & Platforms: Wireshark, Snipe-IT, AUGIX MSP Net Portal, VirtualBox/VMware, Windows Server 2022, Firebase, FastAPI

EXPERIENCE

Tolaram Africa Enterprise Ltd.

Mar 2025 – Sep 2025

Networking Intern · Lagos

- Participated in end-to-end network commissioning of a new office from scratch — ran and crimped structured cabling, configured Huawei switches, access points, Firewalls, and managed deployment through the AUGIX MSP Net Portal
- Assisted in a company-wide switch upgrade, migrating from legacy Cisco switches to newer Huawei hardware and handling firewall configuration to maintain network security continuity
- Deployed and configured Snipe-IT as the IT asset management system for the helpdesk team, enabling structured tracking of hardware inventory across the office
- Supported day-to-day network monitoring, troubleshooting, and IT helpdesk operations; maintained documentation on network topology and incident logs

PROJECTS

[X Telegram Bot Downloader](#): Cloud Video Delivery System

2026

Python, AWS EC2, S3, IAM, FastAPI, Docker, Nginx, SQLite, yt-dlp

- Built and deployed a production Telegram bot on EC2 that downloads X/Twitter videos at user-selected quality, stores files in a private S3 bucket, and serves them via Nginx reverse-proxy with resumable HTTP range-request support
- Implemented IAM role-based S3 access (no hardcoded keys), per-user rate limiting, daily quotas, deduplication caching, and automatic storage cleanup — designed throughout with cloud security best practices

[Ghost Pay](#): Voice-Activated Payment Backend

2026

TypeScript, Firebase Cloud Functions v2, Firestore, Whisper API, Gemini, Kora Payments, WhatsApp API

- Built the backend orchestration layer for a voice-activated payment app — audio input is transcribed via Whisper, parsed for intent by Gemini, then routed through Kora checkout and confirmed via WhatsApp
- Secured all functions with JWT verification and Kora webhook signature validation; enforced Firestore rules so merchants can only access their own transaction data

pfSense Firewall Lab: Multi-VM Secure Network Configuration

2025

pfSense, Windows Server 2022, Windows 11, Kali Linux, VirtualBox

- Set up a pfSense firewall with granular rules across a multi-VM environment (Windows 11, Windows Server 2022, Kali Linux), simulating a segmented enterprise network
- Configured Active Directory on Windows Server 2022, joined client VMs to the domain, and enforced group policies via gpedit to practice identity and access management

Windows VM Penetration Test: Privilege Escalation & Defense Evasion

2024

Metasploit, Kali Linux, Windows 11, Metasploitable 2, VirtualBox

- Conducted full penetration tests on a Windows 11 VM and Metasploitable 2, exploiting vulnerabilities and practising privilege escalation, defense evasion, and post-exploitation techniques
- Participated in a GDG campus challenge, successfully identifying and exploiting a vulnerability in a navigator application in a controlled CTF-style environment

File Converter: Offline Universal File Conversion CLI

2026

Python, Poppler, LibreOffice, WeasyPrint

- Built a fully offline Python CLI tool supporting 43 file conversions across documents, images, eBooks, data formats, and markup — installable as a system-wide command via pip
- Handled cross-platform system dependency management (Poppler, LibreOffice, WeasyPrint) and built a clean interactive terminal UI with progress indicators and smart output path suggestions

Keylogger: Ethical Research Keystroke Monitor

2025

Python

- Developed a Python-based keylogger for ethical research, capturing keystrokes and monitoring system activity in isolated lab environments to study offensive techniques and inform defensive countermeasures
